GLADIOLUS BULBS

INDEXED

M. CRAWFORD COMPANY

CUYAHOGA FALLS, OHIO

To Our Customers

FOR THIRTY-FIVE YEARS—half a lifetime—we have sent out our modest catalog to our circle of patrons, and again we greet you all with hearty wishes for your prosperity. Again we thank you for your orders, your courtesy, your kindness, and your patience in times of stress, when the weather was adverse, and hindrances were unavoidable.

Our list of varieties is smaller than usual, owing to the cold, late spring of last year, which put our shipping season back two weeks, and rendered it impossible for us to get at our own planting until too late to do it as we wished. Also, in some instances we accepted orders that took our entire stock of the variety, and left us none to plant. This will explain why some desirable sorts that we have sold for years do not appear in our present list. Those that we did plant experienced a drouth so severe that some varieties made scarcely one tenth of a normal increase. We are hoping for a good spring and a favorable summer for our business, and whatever the outcome may be, we intend to go straight ahead and do our best.

Our stock of Sample was sold out before this catalog went to press, and Dunlap and Wm. Belt nearly so. These have been three of our dependables in times past, and we deeply regret their scarcity, not only for ourselves, but for those who wish to purchase. We are looking for better things next year.

Our Shipping Season begins about the first of April, sometimes a little earlier than that, very seldom later; though last spring, which was the most backward in all our experience, we never dug a plant until the sixteenth of April.

Our Packing is first-class, secure and at the same time light, thus reducing transportation charges to a minimum.

We Warrant our plants to reach their destination in good order. If they are not satisfactory we will replace them or return the price. This guarantee does not extend to other countries than our own, and it terminates here on the first day of May.

Mistakes—Our work is done with careful attention to every detail, and we seldom make mistakes, but they are possible and when they occur we rectify them with pleasure. In such cases we should be notified promptly.

True to Name—In growing plants we take the greatest care to keep the varieties separate, and are perfectly sure that those grown from stock of our own raising are pure and true to name; but it has happened a few times in our experience that plants purchased to propagate from were not true, and we sold them without knowing this. In such a case we cheerfully make restitution, but stipulate that we

shall not be liable for more than the price of the plants.

Order Early—If you are not prepared to remit, forward your order and have it booked, then send the money when you are ready for the plants.

Time of Shipment—It is our wish to send out every order just when it is wanted, and our patrons can make it easy for us to do this by naming a date on which they would like their plants shipped. If you cannot decide this point so long beforehand, say "Ship when notified," and write us when you are ready.

Our Terms are cash before shipment, except when dealing with experiment stations and other public institutions.

Remittances may be sent by bank paper, money order or registered letter; or, if small, in stamps. Do not trust currency in letters unregistered.

Substitution—Early in the season it is needless to mention this, but later on it is a good plan to say whether we may substitute or not. Oftentimes we can do this satisfactorily if permitted. To those who order late in the season we recommend naming a second choice in case we are out of the first. We reserve the right to substitute as best we can after the fifteenth of April.

Certificate of Nursery Inspection

No. 124

COLUMBUS, OHIO,

August 31, 1914

This is to Certify, That the nursery stock for sale by M. Crawford Co. of Cuyahoga Falls, County of Summit, State of Ohio, consisting of small fruit plants has been inspected by a duly authorized in-

spector, in compliance with Section 1124, Page 314, Laws of Ohio, 1913, and has been found apparently free from dangerously injurious insects and plant diseases.

Valid until September 15, 1915, unless revoked.

Signed, The Agricultural Commission of Ohio.

A. P. SANDLES, President

N. E. SHAW, Chief Inspector

DESCRIPTIONS OF SOME NEW VARIETIES

Dr. Walter Van Fleet, the well known horticulturist, produced several years ago a large number of very superior seedlings by crossing the best foreign and native varieties. Three of these, Early Jersey Giant, Edmund Wilson and Late Jersey Giant, were introduced by J. T. Lovett, and we quote from his descriptions, as they have not fruited with us.

Early Jersey Giant (P). Very early. "Ripens with the very earliest. Fruit very large, brilliant scarlet-crimson, conical with pointed tip, colors all over at once, has delightful aroma and rich, mild, wild strawberry flavor. Large light green calyx, hence exceedingly showy and attractive. Plant a strong grower with large leaves on long, pliant stems, and a heavy yielder. The largest and best very early variety."

Edmund Wilson (P). Midseason to late. "The plants resemble potato vines in size and vigor. Upon good soil they attain a height of twelve to fifteen inches, and are enormously prolific. The berries are as large as small apples. Form, globular or bluntly heart shaped, of deep maroon color with smooth surface and quite firm. Perhaps the richest in sugary lusciousness of all—indeed a marvel in size and high quality."

Late Jersey Giant (P). Very late and "The largest and best late strawberry. The berries are of immense size—truly mammoth—heart shaped, and exceptionally uniform in shape and size; surface smooth and glossy, bright flame color, meaty texture, quality mild, rich and sweet, with the flavor and aroma of the wild berry very pronounced. Calyx bright green and unusually large. Plant of large proportions with large, rather light green leaves, held upright on stiff stems. The berries are produced in clusters of six to a dozen, and are usually held from the earth on remarkably large,

strong fruit stalks. The yield is enormous,—so great in fact, that at the height of the season one can pick several quarts without stepping a yard."

Joe Johnson (P). Late. This new berry is a native of Maryland, and was introduced from that state last year. The introducer L. G. Tingle, says that "It makes a nice bed of plants, and is very productive of very large berries. It is a beautiful red berry with a bright green calyx. Flavor is one of the best; a perfect table and canning berry, and one of the very best shipping varieties."

Roosevelt (P). Early and holds out late. Originated in Maine by Geo. M. Robbins, and introduced a year ago by C. S. Pratt of Mass., who says that it will out-yield Sample, eleven quarts to eight. He also says, "It is a very strong, vigorous plant, with long roots that will stand drouth. Makes quantities of plants and needs plenty of room to grow. A fine variety to plant on dry land. Every berry of fine shape, and perfect as run in a mold. A sweet berry. A firm good market berry. And you want it."

Todd's Late Champion (I). Late, as its name implies. Originated and introduced by W. S. Todd of Delaware, whose name it bears. It is described as very late and very productive. Mr. Todd says, "The plants are extra large, with tall, dark green, healthy foliage, and each produces several strong fruit stalks which keep the fruit well off the ground. The fruit is large, of even size and shape, and is well protected by the tall heavy foliage. It is firm enough for a commercial variety. Grown on a low, moist, black soil it was a light glossy red, but on light soil it was much darker red, and was fully as large and productive on the latter as the former."

OTHER VARIETIES

Bubach (I). Midseason. One of the old reliables. Very large.

Dunlap (P). Medium early and makes a very long season. It is hardly necessary to describe this most popular sort. Its small, hardy plants with long roots, its immense productiveness, and its beautiful, delicious fruit are known the country over.

Ekey (P). Early medium. Makes large, thrifty plants, and yields well. The fruit is large, long, dark red and very attractive. The flavor is good, though not as sweet as Wm. Belt.

Frances E. Willard (I). Midseason. After this berry was named, the originator, Mr. D. J. Miller, received a communication from the Agricultural Department at Washington, saying that the name was too long for convenience, and asking that it be shortened. Accordingly, we have dropped the first part, and will henceforth call it Willard. This is truly a wonderful berry, very large, and very beautiful. Its color is that brilliant, glossy red that seems to belong particularly to the strawberry, and is one of its chief attractions. The flesh is as red as the surface, and delicious in quality, juicy, sprightly

and refreshing. The plant is large and healthy with an abundance of bright, thrifty foliage, which amply protects its great crop of beautiful fruit. It makes a generous increase by runners, and yields splendid berries and plenty of them in the matted row. Every blossom makes a berry, which gives it a good length of season, and the fruit ripens all over at once,—no white tips. This grand variety is the result of scientific breeding through many generations. It should have a place in every home garden, and commercial growers will find it one of their most profitable sorts. During the thirty-five years that M. Crawford and the firm which bears his name have been selling strawberry plants, they have introduced many varieties that have become popular, notably Dunlap, Kittie Rice and Wm. Belt, and we confidently expect that our latest addition to the list, the Willard, will in time take its place among the best.

Gibson (P). Midseason. A vigorous grower with ample foliage and long roots, which enable it to yield abundantly even in times of drouth. The fruit is large, red to the center, with a fresh, green calyx, nearly round, and very firm, making it a good shipper. It is good for canning, or for the table with plenty of sugar.

Haverland (I). Early. A vigorous grower, and very productive. The fruit is very large, long conical, bright red, moderately firm and of average quality.

Helen Davis (P). Early. This makes plenty of hardy plants with healthy foliage, and is a wonderful yielder. The fruit is very large, conical, smooth, rich red all through, and of fine flavor. It makes a long season.

Highland (I). Midseason. One of the introductions of our firm, and especially noted for its productiveness. The plants are large and produce plenty of runners. The fruit is obtusely conical, fine glossy

red, very juicy, rather tart, and extra fine for canning. It is only moderately firm.

Hub (P). Medium to late. A seedling of Bubach and Belmont, a good grower and yielder. The fruit is beautiful, dark red, smooth, shining, and of average flavor.

Kellogg's Prize (P). Early to very late. A vigorous grower, and very prolific, the beds growing more so with age. The fruit is large and firm, rich red with red flesh and golden seeds. Flavor delicious.

Kittie Rice (I). Midseason. Also called Downing's Bride. One of the finest of the late John F. Beaver's productions, and wonderful in both plant and fruit. It makes a moderate number of fine plants, and yields heavy crops of large beautiful berries, lustrous as satin, red throughout, and of the richest flavor. It must have winter protection.

Model (P). Midseason. A seedling of Wm. Belt, and somewhat similar in growth and fruit to that splendid variety.

Superb (P). Everbearing. This class of berries has become so well established that it is not necessary to discuss their value. All strawberry lovers realize how delightful it must be to bring this delicious fruit fresh from the garden all through the late summer and fall. The Superb is a splendid grower and plant maker, and also a great yielder. The fruit is of good size, round, dark red all through, and beautiful for both table use and canning. It is very firm, and its flavor is good, though not equal to Americus or Wm. Belt.

Wm. Belt (P). Midseason. This has long been the standard by which to measure the flavor of all other berries, and very few have ever equaled it. The plants are splendid, and very productive of immense berries. The first one to ripen on each stem is cockscombed, the others are conical. Their color is bright and beautiful, and they are reasonably firm.

A FERTILIZER FOR THE STRAWBERRY

For several years we have been selling a Potato Phosphate made in Zanesville, O., but its manufacture has been discontinued on account of scarcity of potash, which comes from Germany, and is very dear. In its place we are offering another brand called "Century," made by the same firm. This also is packed in 100 lb. sacks, and the price is \$1.40 per sack. The buyer pays the freight. The guaranteed analysis is as follows:

Ammonia	:	:	:	:	2 per ct.
Phosphoric acid	:	:	:	:	10 per ct.
Actual potash	:	:	:	:	2 per ct.

In using this fertilizer for strawberries it may be put in with a grain drill, after

the ground is prepared for planting, about a week or ten days before the plants are to be set, thus giving it time to become somewhat blended with the soil. Another way is to wait a short time after the plants are set, until they have started into growth, and then apply the fertilizer by hand, strewing a small quantity around each plant. Care must be taken not to let it touch the leaves, as it is liable to burn them. It should be put on when the air is still.

The amount required is exceedingly variable. From 400 to 1000 pounds per acre may be used, and even more if desired. For a small bed, one pound to each rod of a row is a liberal application.

PRICE LIST OF STRAWBERRY PLANTS.

These prices are by express, not prepaid. If ordered by mail see "Parcel Post Rates" below.

Six plants of one variety at dozen rates; 50 of one variety at hundred rates; 500 of one variety at thousand rates.

Imperfect varieties, (I.) must have perfect varieties (P) near them.

Imperfect and pistillate mean the same; perfect, staminate and bisexual mean the same.

CLASSES AS TO TIME OF RIPENING.

EARLY.—Dunlap, Early Jersey Giant, Ekey, Haverland, Helen Davis, Kellogg's Prize, Roosevelt.

MEDIUM.—Bubach, Edmund Wilson, Willard, Gibson, Highland, Hub, Kittie Rice, Model, Wm. Belt.

LATE.—Joe Johnson, Late Jersey Giant, Todd's Late Champion. It will be noticed that some of those otherwise classed are described as bearing late.

EVERBEARING.—Superb.

PARCEL POST

Bulbs, plants and seeds may now be shipped by parcel post, and within 600 miles of the shipping point, this is a decided advantage over the former rate of one cent for every two ounces.

TABLE OF ZONES AND RATES

Zone	Miles	First Lb. or Fraction Above 8 oz.	Each Add. Lb. or Fraction
1—Within	50	5c	1c
2— "	150	5c	1c
3— "	300	6c	2c
4— "	600	7c	4c
5— "	1000	8c	6c
6— "	1400	9c	8c
7— "	1800	11c	10c
8—Above	1800	12c	12c

Packages of bulbs plants or seeds, weighing eight ounces or less, go to any part of our country at the old rate, one cent for every two ounces or fraction. Those that weigh more than eight ounces go at parcel post rates. The limit of weight is fifty pounds for the first two zones, and twenty for all others.

Ask your postmaster or rural carrier what zone Cuyahoga Falls is in, and estimate your postage from the table.

Strawberry plants will average between 3 and 4 pounds per hundred plants in weight, which will require postage on 4 pounds.

CURRANTS

We have sold our entire stock of this fine fruit to I. Lower, Nurseryman, Barberton, Ohio.

THE GLADIOLUS

There is probably no other flower that is gaining in popularity as rapidly as this. It is easily grown and very beautiful. It comprises a wonderful range of colors and its keeping qualities make it exceedingly desirable as a cut flower. Any one having the use of a garden spot can grow it at little cost, and a very small outlay for bulbs will make a good start.

We offer our splendid XX stock, which is the finest mixture we have ever seen, together with a number of choice named varieties which include many beautiful colors and shades. All good blooming bulbs.

We can ship by mail, express or freight, according to the number ordered.

America—This is by far the most popular variety before the public at the present time. Its rare color, a very delicate pink with a suggestion of lavender, its crimson markings in the throat, and its large, wide open flowers, most beautifully arranged upon the stem, form a combination that is wonderfully charming.

Augusta—White with a faint tinge of blue, and blue anthers. It may be called the standard white. Sure to bloom, and very hardy.

Canary Bird—Pure canary yellow. The name describes the color. Of great value.

Early Amethyst—This variety grows very tall, and the stem is slender and graceful. The color of the flower is a blending of violet and amethyst, with a yellow spearhead on the lower petal, making a contrast that is much admired.

Europa—This is probably the finest pure white variety on the market. It produces a large, elegant spike, one for which no apology is ever needed. It will probably occupy the first place among whites for a long time, as its blooms are very large, and it produces bulblets freely.

Glory, Ruffled—The petals are crimped along the edges, giving the flower a very attractive appearance. The color is a delicate, creamy pink, with a bright crimson stripe through the center of each lower petal. One of A. E. Kunderd's new ruffled strain. Much admired.

Golden King—New and very fine. L. Merton Gage, ex-secretary of the American Gladiolus Society, considers it the best American yellow. It is a deeper yellow than Klondike, has a more brilliant maroon blotch in the throat, and the flowers are nearly twice as large. The spike carries twenty or more buds and shows six or eight flowers open at one time.

Grace Henry—Originated by M. Crawford. A fine grower, makes a long, straight spike scarcely ever branched, and large dark red bulbs with plenty of bulblets. The flowers are large, and well arranged on the spike, which opens six or eight at once. The color is a dark, rich red with a satin luster, and a lighter shade through the center of each petal. The lower ones are beautifully mottled with red and white.

Helen Sill—This, also, was originated by M. Crawford. It is a good, healthy grower with a fine long spike, and large, shapely flowers perfectly arranged. The color is a rich lavender pink of rare beauty. Desirable for any purpose.

Jean—Originated by M. Crawford. This is a luxuriant grower, making plants and flowers of the largest size. The spikes are straight and shapely, and the blooms well placed. They are deep pink, sometimes penciled with red, very showy, and much admired.

Jessie—Originated by M. Crawford. This brilliant variety may be described as red velvet. The stem is slender and graceful, and the flowers are a most brilliant red, with a stroke of equally vivid yellow on each of the lower side petals. It blooms very early and from very small bulbs.

Klondike—Tall and straight. Lemon color, with a maroon blotch in the throat.

Margaret—Originated by M. Crawford, and one of his best. It is a splendid grower and makes a tall, strong flower stem, bearing from twelve to twenty blossoms, and opening five or six at once. The flower is large, and its coloring is unique—a beautiful cherry red, with a large white throat, and an exquisite shading of purple where the two colors come together.

Mrs. Francis King—A vigorous grower with a tall, straight spike. Flowers large, and of a pleasing shade of orange scarlet, but not quite close enough together.

Mrs. Watt—This is greatly admired by all who see it. Under favorable conditions it grows to a height of four feet, and is so strong and sturdy that it rarely blows over. It is perfectly healthy, and produces a moderate number of bulblets. The flowers are of good size and shape, properly arranged on the spike, and of a beautiful, solid, dark crimson color.

New America—This makes great bulbs and great plants, and tall, straight spikes. The color is a beautiful blending of pink and white.

Niagara—New, and one of the best yellows out. A vigorous grower, and makes large, handsome flowers. This is receiving much attention from bulb growers.

Panama—This is a seedling of America and resembles that favorite in some respects, but is a deeper pink and the flower is larger. It has received certificates of merit and medals from many societies and clubs. It was originated by the late Frank Banning, an Ohio grower.

Peace—A fine late white, making great bulbs, and tall, strong spikes, well set with large, finely formed flowers. It shows no color except a few lines of lilac in the throat, but if allowed to bloom outside when the sun is very hot, it is liable to take on a tinge of pink. Finest bloomed in the shade.

Princes—A wonderful variety. The flower is immensely large, and the color is a deep, shining scarlet with large white marks on the lower petals. The spike is of medium length, and opens two or three flowers at a time.

Taconic—A vigorous plant and makes a tall, strong stem. The flowers are very showy, bright pink with blotches of brilliant cherry in the throat.

Theodosia Grant—Of all known varieties of gladioli we believe that this is the most delicate in coloring, not even excepting the whites. Itself is white from the center outward, but its snowy petals are edged with a fine shading of shell pink, reminding one of that loveliest of spring flowers, the trailing arbutus, or mayflower. The blooms are of good size, though not the largest, and so perfectly arranged on the stem that they present a graceful and charming front of the most exquisite blending of delicate shades. It is a vigorous grower, perfectly healthy, and makes a stem of good height, bearing a long spike of flowers, many of which are open at once. It is much admired wherever exhibited, and we predict for it great popularity.

Wm. Mason—Brilliant red, veined with a darker shade, large and showy. A fine, sturdy grower and conspicuous in the field by reason of its dazzling color.

White Lady—One of the best whites. It has no suggestion of color except a tinge of cream in the throat. Very fine every way, especially to bloom in water, coming out in perfection to the tip of the spike, never looking pinched, but showing broad, ample petals on the very last flower. There has been some complaint that the White Lady is delicate in constitution, but it has shown perfect health and vigor during the six years that we have grown it.

Yellow Seedling—New and desirable. A delicate yellow with red markings in the throat, a combination which makes it very brilliant in the field. It is a free bloomer, and at a little distance has the appearance of a glowing mass of yellow enriched with red. Yellow varieties are not very numerous, and it is quite an advantage to get a new one of that color at such a moderate price.

Mixed Varieties—By many years of careful management our XX stock has been built up to about the highest attainable degree of excellence. Each year we add to it some choice varieties—never anything inferior—and mark out some that multiply too fast, thus keeping it balanced. We are confident that this mixture can not be surpassed for high quality.

Cultivation of Flowering Bulbs—A full-grown bulb should be allowed a square foot of space. The soil should be pulverized to a good depth, and liberally enriched; preferably by scattering manure over the surface after the planting is done. The bulbs should be planted six inches deep. Frequent stirring of the surface is necessary to promote steady growth. If the flowers are to bloom on the plants, some support may be necessary to prevent damage by wind, but it is better for the bulbs to cut the spikes as soon as the first flowers open, taking no leaves except the two attached to the stem. The blossoms come out perfectly in water, and when properly cared for by taking off the withered flowers, shortening the stems, and giving fresh water every day, they remain beautiful to the last.

Some amateurs believe that their bulbs run out, that they change color, and that a collection of many varieties comprising various colors, will, in time, revert to red. This is a mistake. A given variety will remain the same always. The belief that they change may be explained by an illustration: Suppose that an amateur buys a hundred blooming bulbs comprising thirty varieties or more. Some of these will increase rapidly, others scarcely at all. As the stock increases the multipliers predominate, and in time overshadow the collection. If a few bulbs are sold or given away from time to time, those that have not increased are liable to go, and thus disappear from the stock, and a repetition of this process eliminates all that do not increase rapidly. Twenty-five years ago or more we found that one variety in our mixed stock was gaining too fast, and in one summer we pulled up ten thousand when in bloom and threw them in a pile.

PRICE LIST OF BULBS

Large lots go by express, not prepaid. By mail, on bulbs that are 10 cents each, or more, we prepay the postage. For postage on those that are less than 10 cents, add 1 cent each, 3 cents for 6. Any parcel that weighs more than 8 ounces must go by parcel post. See rates on page 5. Bulbs average about 1 ounce each, or 6 lbs. per hundred in weight.

Six bulbs of one variety at dozen rates; 25 of one variety at hundred rates; 250 of one variety at thousand rates.

These are all fine, large, blooming bulbs though not all up to one and one-half inches in diameter.

KUNDERD'S NEW GLADIOLI

We are pleased to state that we have made an arrangement with Mr. A. E. Kunderd, the originator of the new ruffled strain of gladioli, by which we can offer a number of his choice varieties at his prices. These are the result of years of careful breeding, and Mr. Kunderd's high standard is sufficient assurance that whatever he recommends is fine. The following list includes both plain and ruffled sorts, and all are wonderfully beautiful.

ALICE TIPLADY—Grand, large, beautiful orange saffron. Very choice. Each 50c.

CHERRY KING—Bright, rich cherry. Deeper throat. Lily-like flower. Each 15c; doz. \$1.50.

FAIR COLUMBIAN—Tall, vigorous plant, large, lilac pink blooms. Deeper in throat. Each 20c.

GIANT WHITE—Extra large. Slight marking on lower petals. Each 25c; doz. \$2.50.

GLORY X SPECIES PRIMULINUS—Ruffled. Large, pale salmon yellow. Each 25c; doz. \$2.50.

GOV. HANLEY—Tall, showy, rich cardinal. Deeper throat color. Each 15c; doz. \$1.50.

IDA VAN—Deep salmon red. Brilliant. Highest award at Cleveland. Each 15c; doz. \$1.50.

IVORY—Intensely ruffled. Ivory white with light markings in throat. Each 30c; doz. \$3.00.

KUNDERD'S CARDINAL KING—Best solid cardinal scarlet. Brilliant. Each 15c; doz. \$1.50.

LITTLE DIAMOND—Ruffled. Rich salmon pink, flaked deeper salmon. Penciled throat. Good size. Each 35c; doz. \$3.50.

MRS. A. E. KUNDERD—Tall, large flowered, white with a slight tinge of blush pink. A magnificent white. Each 20c; doz. \$2.00.

MRS. FRANK PENDLETON—Bright pink on white ground. Giant blotch of carmine on lower petals. Grand. Each 25c; doz. \$2.50.

MYRTLE—Most beautiful delicate pink. Flowers bring highest price. Each 35c; doz. \$3.50.

ORANGE GLORY—Ruffled. Grand orange with lighter throat. Rich, striking, beautiful. Each \$1.00.

PINK BEAUTY BLOTCH—Ruffled. Fine pink, beautifully blotched. Large flowers. Each 30c; doz. \$3.00.

PRIDE OF GOSHEN—Ruffled. A giant Glory, salmon or flesh pink. Each 25c; doz. \$2.50.

RED AMARYLLIS—Brilliant, blood red flowers of giant size. Gorgeous. Each 35c; doz. \$3.50.

SUMMER BEAUTY—Pink, a very choice and distinct shade. Grand. Each 25c; doz. \$2.50.

WHITE GLORY—Ruffled. A Pure white Glory, with beautiful iris-blue throat. Fine. Each 75c.

WHITE IVORY—Intensely ruffled. Snow white, ground with beautiful red blotches on lower petals. Very extra. Each 50c; doz. \$5.00.

WHITE KING—(Patrician). Splendidly ruffled. Very rich sulphur white. Each 20c; doz. \$2.00.

YOUELL'S FAVORITE—Ruffled. Striking lavender pink. Conspicuous and fine. Each 35c; doz. \$3.50.
